CAREER OBJECTIVE

Results-driven IT professional with a Bachelor of Science in Information Technology (Software Engineering) and hands-on experience in software development, system testing, troubleshooting, user support, and production system maintenance within government environments. Experienced in the full software development lifecycle (SDLC), web application testing, defect logging, User Acceptance Testing (UAT), and database-driven systems. Strong ability to collaborate with business users, developers, and stakeholders to ensure delivery of reliable and high-quality systems.

EDUCATION

BSc in Information Technology | Richfield Graduate Institute of Technology | 2021

Matric Certificate | Makgoka High School | 2018

Microsoft 365 Certified: Fundamentals | 2024

Microsoft Certified: Dynamics 365 Fundamentals (CRM) | 2024

WORK EXPERIENCE

Software developer, Department of Correctional Services **2025 - present**

- Developed and maintained the Contraband Management System and Prison Visit Booking System using C#, ASP.NET MVC, SQL Server, JavaScript, HTML, Angular, and React concepts.
- Participated in software testing activities including functional testing, regression testing, system testing, and User Acceptance Testing (UAT).
- Prepared and executed test cases, test scenarios, and testing documentation to validate system functionality against business requirements.
- Logged, tracked, and monitored defects during testing and ensured resolution with development teams.
- Worked closely with business analysts, system analysts, and developers during the SDLC process.
- Assisted with preparation of test environments and configuration management documentation.
- Performed troubleshooting, debugging, and issue resolution for live production systems.
- Supported IIS deployment, database integration, and maintenance of enterprise web applications.
- Conducted user support and assisted with training users on deployed systems.

- Contributed to reporting, workflow automation, and database-driven functionality improvements.

IT Intern, Department of Home Affairs

2022 - 2024

- Assisted in maintaining and enhancing internal web applications and database systems.
- Participated in testing activities including debugging, defect identification, system validation, and quality assurance support.
- Supported frontend and backend development using JavaScript, Angular, React concepts, SQL Server, and ASP.NET technologies.
- Assisted with SDLC documentation, troubleshooting, and technical support.
- Worked with developers and stakeholders to ensure system functionality aligned with business requirements.
- Participated in user support, issue resolution, and system maintenance activities.
- Supported implementation of validation logic and security controls for scalable web applications.

SKILLS

Languages: C#, Java, JavaScript, Python

Frameworks: ASP.NET MVC, Angular, React

Web Technologies: HTML, CSS

Database Technologies: SQL Server, PostgreSQL, Database Integration and Management

Tools & Platforms: Git, GitHub, VS, Microsoft SQL Management Studio, IIS (Internet Information Services), Microsoft Azure, Web Editing Tools, Azure DevOps

Software testing & QA: System Testing, Functional Testing, Regression Testing, User Acceptance Testing (UAT), Defect Logging and Tracking, Test Case Development, Test Planning and Documentation, Test Data Preparation, Quality Assurance Processes

PROJECTS

Contraband Management System

Technologies: C#, ASP.NET MVC, SQL Server, JavaScript

- Developed a full-stack web-based contraband tracking and reporting system.
- Participated in testing, debugging, defect resolution, and deployment support.
- Assisted in validating workflows and database functionality through system testing.

Booking System

Technologies: C#, ASP.NET MVC, SQL Server, JavaScript

- Developed a visitor booking and scheduling management system.
- Assisted with UAT sessions, testing workflows, and troubleshooting production issues.
- Improved operational efficiency through database-driven automation.

Bakery Management System – LindisBakery

Technologies: C#, ASP.NET MVC, SQL Server, PostgreSQL, HTML, CSS, JavaScript, Azure

- Developed a business management system for customer orders, products, and sales tracking.
- Performed testing, validation, and database integration activities.
- Assisted with frontend responsiveness and backend functionality improvements.

CORE COMPETENCIES

- Software Testing and Quality Assurance
- SDLC and Agile Development
- User Acceptance Testing (UAT)
- Test Documentation and Reporting
- Defect Tracking and Resolution
- Business Requirements Analysis
- Full-Stack Web Application Development
- Troubleshooting and Production Support
- Teamwork and Interpersonal Skills
- Communication and Presentation Skills
- Problem Solving and Analytical Thinking
- Training and User Support
- Continuous Learning and Adaptability
